Varta blogging platform

'Varta' Webzine Jan'18

My client wanted a fully dynamic blogging platform with in build search engine.

I build front end and backend pages using html5, php and mysql.

The platform is very popular now with incresed number of subscriber

Staffion - Hotel and employee manager

Staffion keeps all your projects, data, and people in one place. No matter how many projects you have, or how many people you have working on them, Staffion keeps everything organized.It can also be used to maintain staffs and hiring extra staff for special occasions etc. All your projects stored safely in one place online. Whether you have a single project or 100 projects going on at once, you can see everything that's going on at once. When a project is over you can archive it on Staffion so it's stored safely if you ever need it again. Your team, clients, contractors, and vendors together, at last. Everyone involved in a

project can work together on Staffion. You have full control over who sees which project, and who sees each other. You can also create groups to keep people organized (i.e. a "marketing" or "stakeholders" group). See everyone's schedule on one beautiful calendar. It's no longer a pain to coordinate everyone's schedules. Basecamp brings every event from every project together in one place. You can even create special calendars for vacation time, holidays, meetings, or anything else that isn't specifically tied to a project. And many more exceptional features in store for Staffion users..
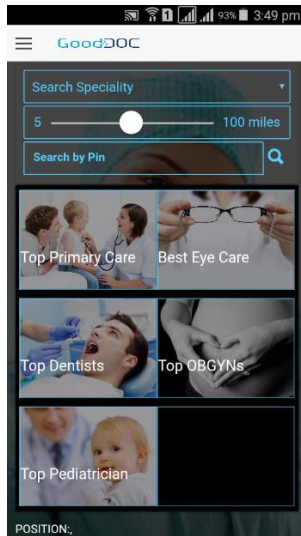

Mobile app for lawyers

My client wanted an android app that would store information about their cases.

I made the UI/UX, API and backend.

Now the app is being used for case management
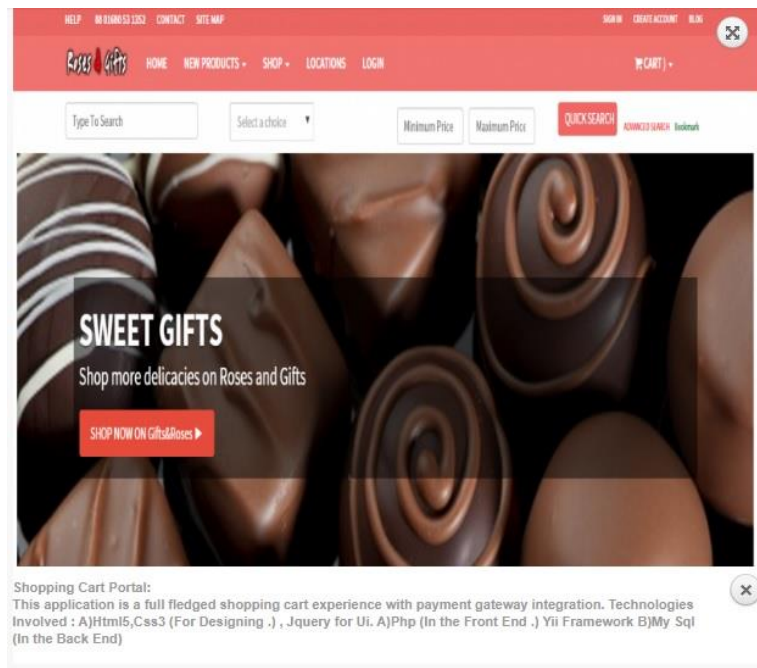

Medical Mobile app

My client wanted an android app that allows users to locate nearby health experts.

I made the app UI/UX as well as API integration.

Now the app has increased usage every month.

Entry EASY

This software is designed to perform data entry operations for the authorities, using them for the proper tabulation and organization of reports and marksheets. In this process data gets accumulated in the database in an organised way. Finally rank of every student is generated through our software and marksheet is printed out through Microsoft Word which is used along with our software. Our software is build on the dot net framework 3.5 . On the frontend there is visual basic.net language and in the back end there is Microsoft Access database .Microsoft word is the only third party application used along with our software while taking the results of several student. Technologies Involved : A)Dot Net (On the front end) B) Sql Server (On the back end)

Reminder Plus
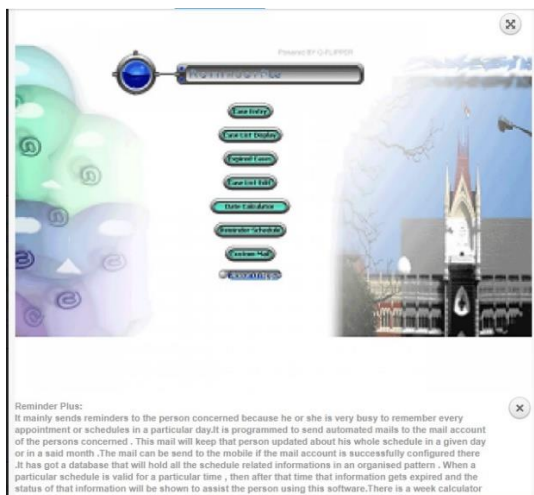

It mainly sends reminders to the person concerned because he or she is very busy to remember every appointment or schedules in a particular day.It is programmed to send automated mails to the mail account of the persons concerned . This mail will keep that person updated about his whole schedule in a given day or in a said month .The mail can be send to the mobile if the mail account is successfully configured there .It has got a database that will hold all the schedule related informations in an

organised pattern . When a particular schedule is valid for a particular time , then after that time that information gets expired and the status of that information will be shown to assist the person using this software.There is a week calculator also helping a person to calculate the date when setting the schedules. At any point of time anyone can view the complete data stored in the database and if there is any discrepancy then he or she will be able to modify or if required can delete the said information.Our software is build mainly on php,mysql language.On the front end there is Php along with Html,Javascript ,Css 2.0 .In the backend there is MySql for database management. Technologies Involved : A)Html ,Css (For designing .) B)JavaScript (For Validation .) C)Php (For The Back End.) D)MySql (For The back End .)
